PROFESSIONAL SUMMARY

Data Analyst seeking to apply strong SQL, Python, and Power BI skills to business intelligence and reporting roles. Hands-on experience analyzing 10,000+ records, building interactive dashboards, performing data cleaning, exploratory data analysis (EDA), and KPI reporting, with applied machine learning experience from a Data Scientist internship. Proven ability to translate raw data into actionable business insights, demonstrated through project work in banking risk analytics and recommendation systems. Comfortable working across the full analytics workflow: data extraction (SQL), analysis (Python, Excel), and visualization (Power BI).

Core Keywords: Data Analysis, Data Analytics, Data Visualization, Data-Driven Decision Making, Dashboard Development, KPI Reporting, SQL Queries, Python, Power BI, Excel, Statistical Analysis, Machine Learning, Business Intelligence

TECHNICAL SKILLS

Programming & Querying: Python, SQL, PostgreSQL

Data Analysis: Pandas, NumPy, Data Cleaning, EDA, Statistical Analysis, Feature Engineering

Business Intelligence: Power BI, Dashboard Development, KPI Reporting, Data Visualization

Excel & Reporting: Excel, Reporting, Data Analysis

Machine Learning: Scikit-Learn, Predictive Modeling, Classification, Regression, Model Evaluation

Visualization Libraries: Plotly, Matplotlib, Seaborn

Tools & Development: Git, GitHub, Jupyter Notebook, Streamlit, REST APIs

PROFESSIONAL EXPERIENCE

CodSoft — Data Scientist Intern (Remote)

June 2025 – September 2025

- Benchmarked 4+ machine learning algorithms using cross-validation and hyperparameter tuning, achieving up to 91% model accuracy and a 0.89 F1-score.
- Improved model accuracy by 30% through exploratory data analysis (EDA), feature engineering, and removal of low-value features across datasets of 5,000–20,000 records.
- Streamlined 3+ end-to-end machine learning pipelines covering data ingestion, preprocessing, model development, and deployment, reducing manual data preparation effort.
- Applied Python, Pandas, NumPy, and Scikit-Learn to transform raw datasets into analysis-ready data and evaluate predictive performance.

PROJECTS

Banking Loan Risk Analysis Dashboard

2025

SQL | Power BI | Python | Excel

- Built an interactive Power BI dashboard tracking loan approvals, default rates, portfolio KPIs, and borrower risk indicators to support data-driven lending decisions.
- Analyzed customer demographics, income, credit history, and loan performance using SQL-based EDA to identify key default risk factors and portfolio trends.
- Developed customer risk segmentation models to classify borrowers by financial profile and support loan approval and portfolio monitoring decisions.
- Wrote optimized SQL queries for loan performance and risk reporting, improving the efficiency of dashboard refreshes and stakeholder insight delivery.

Movie Recommendation System

2025

Python | Pandas | NumPy | Scikit-Learn | Streamlit

- Improved recommendation relevance by 35% by applying cosine similarity and feature engineering to 10,000+ user-movie interactions.
- Built a hybrid recommendation engine combining collaborative and content-based filtering using Python and Scikit-Learn.
- Optimized model inference with Pandas and NumPy to deliver personalized recommendations in under 1 second.
- Deployed the model as an interactive Streamlit web app to serve real-time recommendations to end users.

EDUCATION

Shree Balaji Institute of Technology And Management, RGPV — Betul, India

B.Tech in Artificial Intelligence & Data Science | CGPA: 7.25 | 2021 – 2025

CERTIFICATIONS

- Machine Learning Specialization — Andrew Ng (Coursera)
- SQL for Data Analysis (Coursera)
- Power BI for Data Analytics (Microsoft)
